Parallel Processing in Python

DS 5110: Big Data Systems
Spring 2025
Lecture 6

Yue Cheng

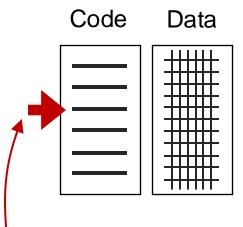

Learning objectives

- Describe the execution model of
 - process-level parallelism
 - thread-level parallelism
 - task-level parallelism
- Know how to measure the speedup metric
- Understand the difference of strong scaling vs. weak scaling

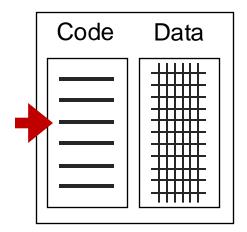

Outline

- Motivation
- Three parallel execution models
- Demo
- Measuring speedup metric
- Task parallelism in Dask
- Demo

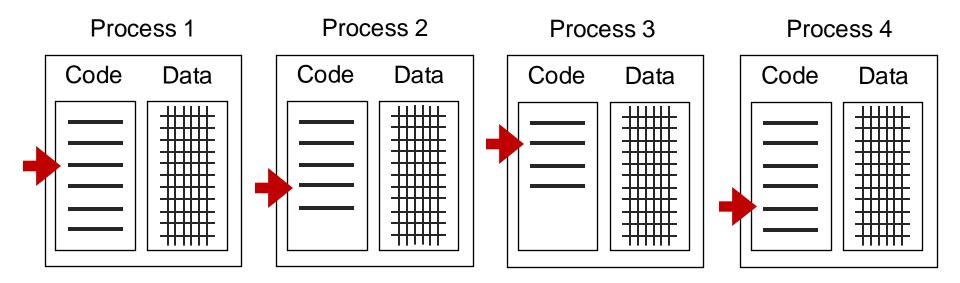

Instruction pointer (also called "program counter")

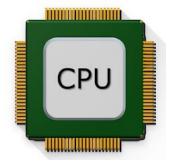

Process

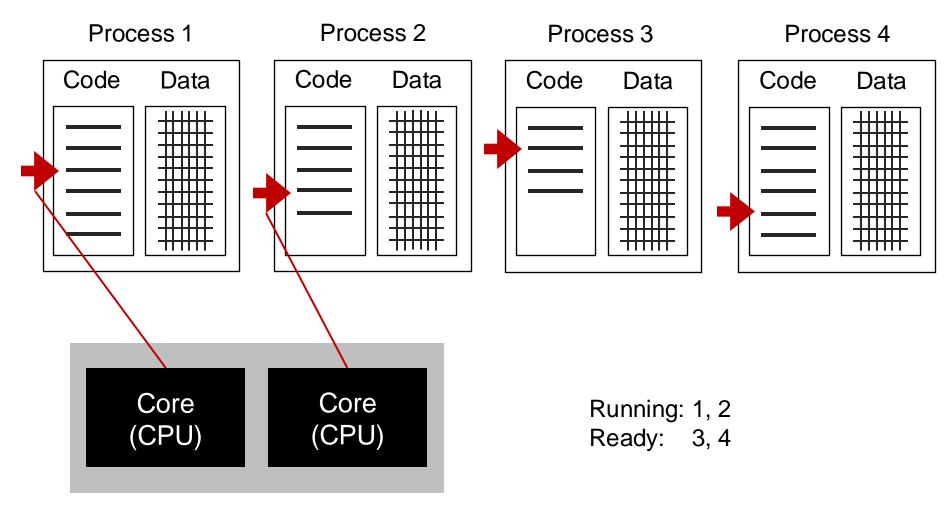

Instruction pointer belongs to a thread within the process

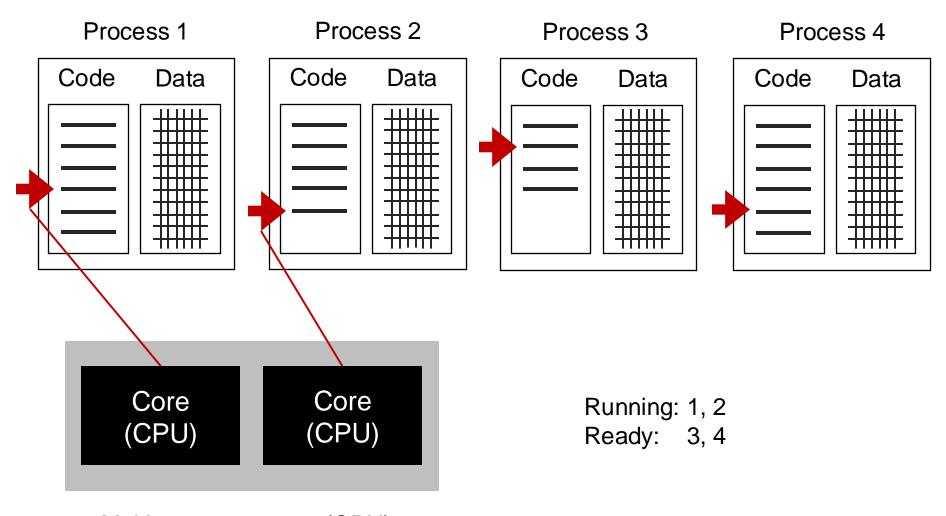

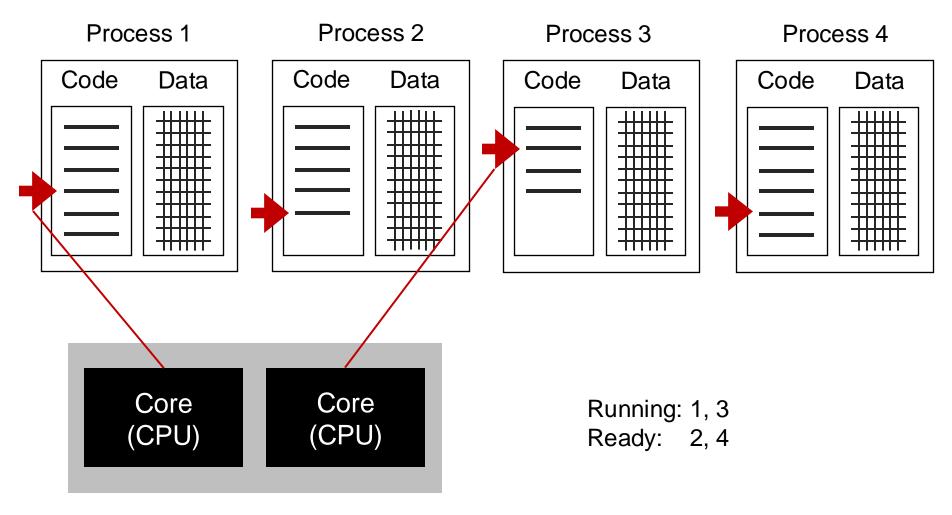

Multi-core processor (CPU)

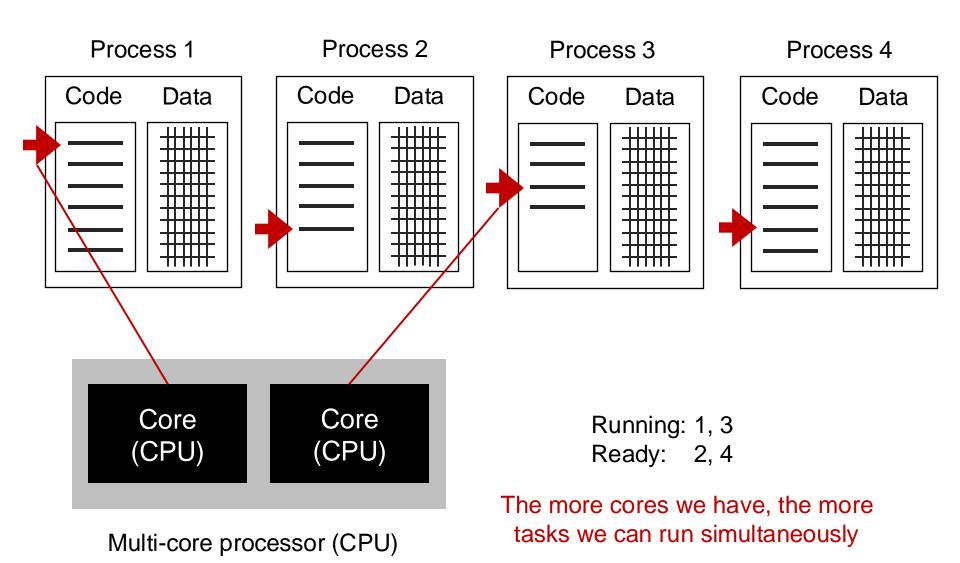

Multi-core processor (CPU)

Multi-core processor (CPU)

Multi-core processor (CPU)

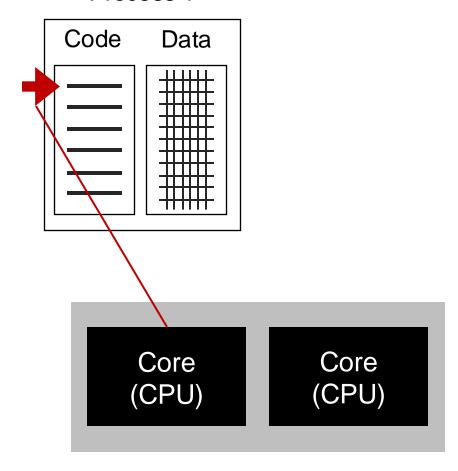

Parallel execution models

- Process-level parallelism
- Thread-level parallelism
- Task-level parallelism

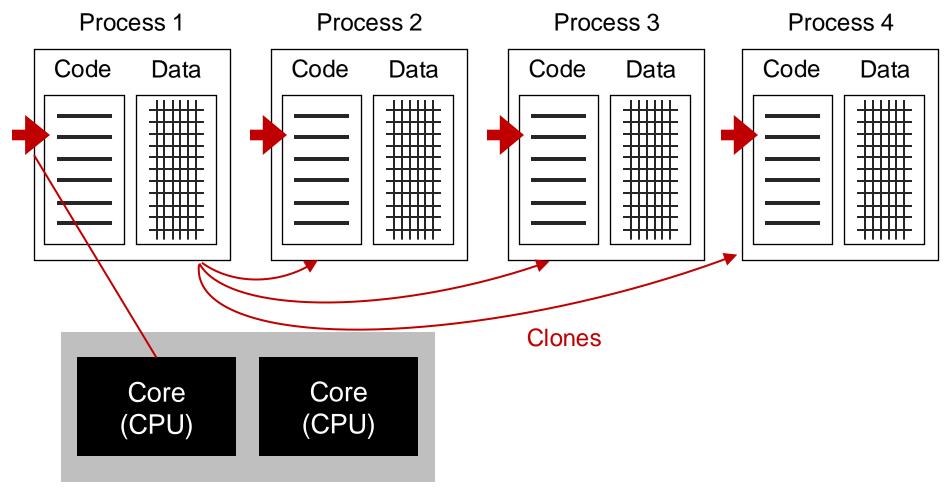

Parallel execution models

- Process-level parallelism
- Thread-level parallelism
- Task-level parallelism

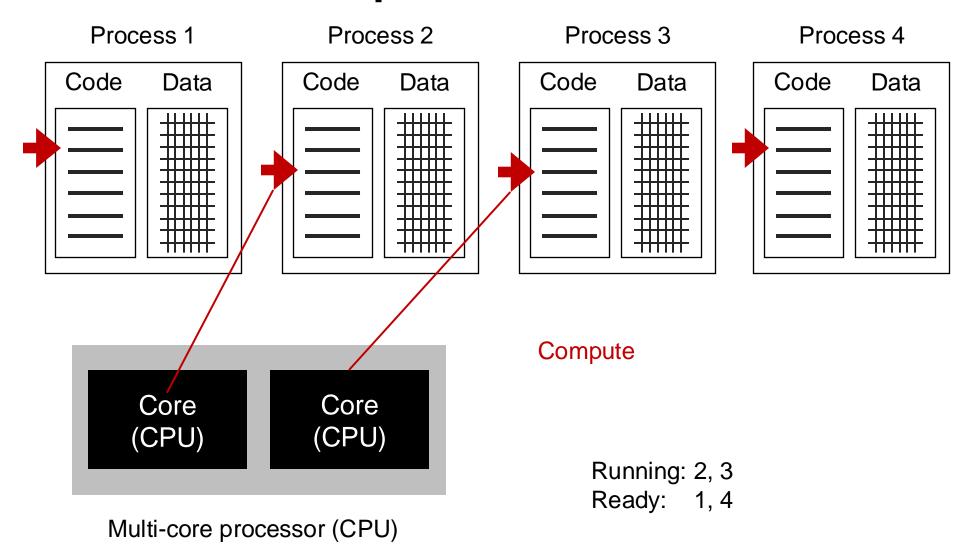

Process 1

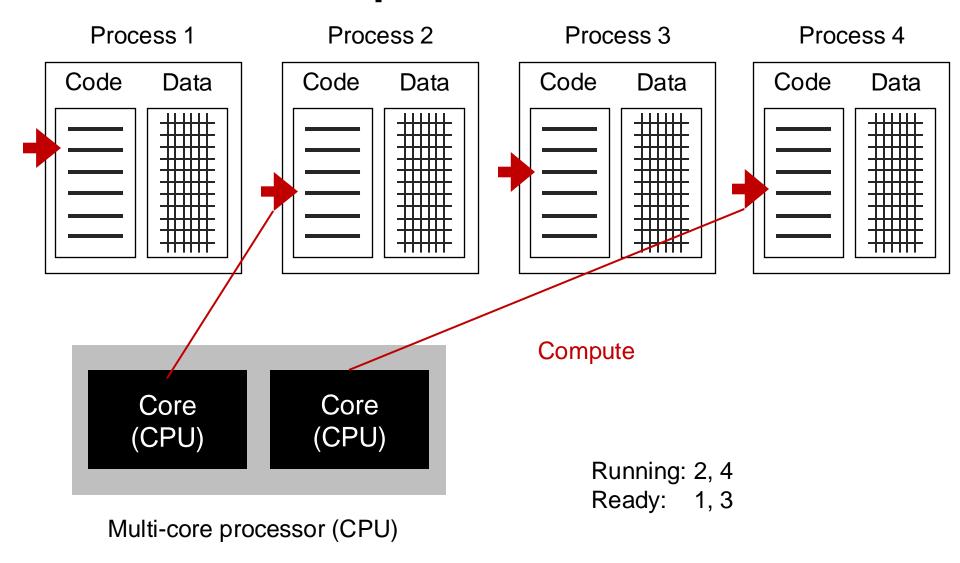

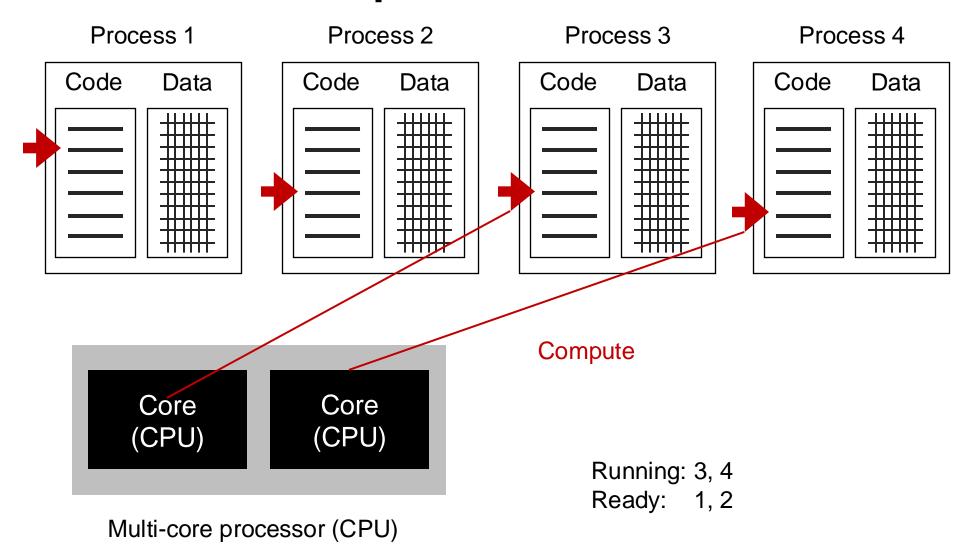

Multi-core processor (CPU)

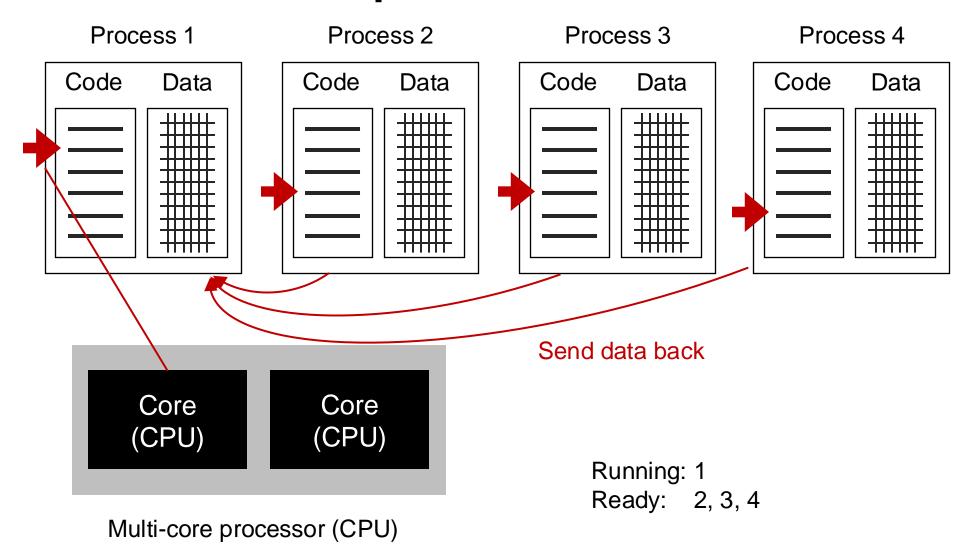

Multi-core processor (CPU)

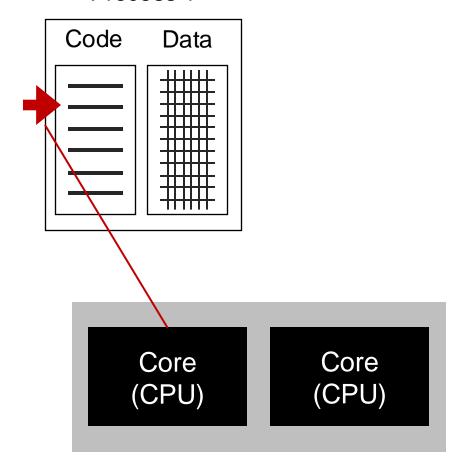

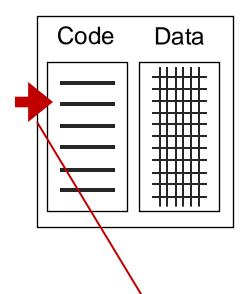

Process 1

Multi-core processor (CPU)

Process-level parallelism in Python

Process 1

https://docs.python.org/3/library/multiprocessing.html

```
from multiprocessing import Pool

def f(x):
    return x*x

if __name__ == '__main__':
    with Pool(3) as p:
        print(p.map(f, [1,2,3]))
```

Core (CPU)

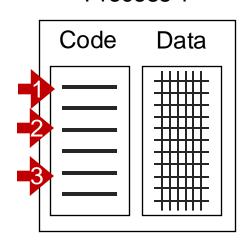

Multi-core processor (CPU)

Parallel execution models

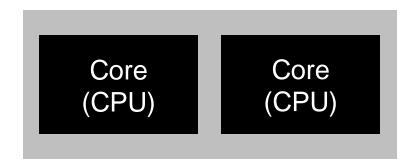

- Process-level parallelism
- Thread-level parallelism
- Task-level parallelism

Thread-level parallelism

Process 1

Threads give us multiple instruction pointers in a process, allowing us to execute multiple parts of the code at the same time!

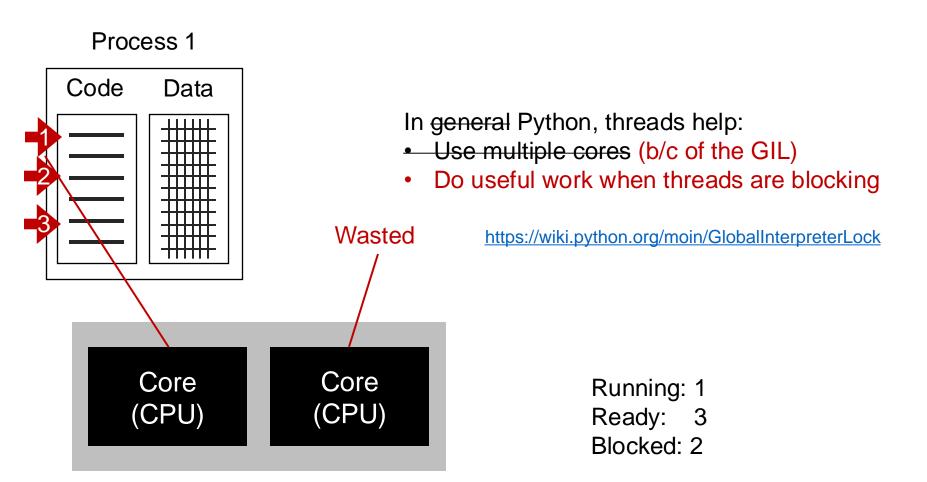

Thread-level parallelism

Process 1 Code Data In general, threads help: Use multiple cores Do useful work when threads are blocking Core Core Running: 1, 3 (CPU) (CPU) Ready: 2

Multi-core processor (CPU)

Thread-level parallelism in Python

Thread-level parallelism in Python

Process 1 Code Data Wasted Core Core (CPU) (CPU)

Recommendation: Don't use threads unless you learn a lot on asynchronous processing and/or coroutines

https://docs.python.org/3/library/asyncio-task.html

In general Python, threads help:

- Use multiple cores (b/c of the GIL)
- · Do useful work when threads are blocking

https://wiki.python.org/moin/GlobalInterpreterLock

Running: 1

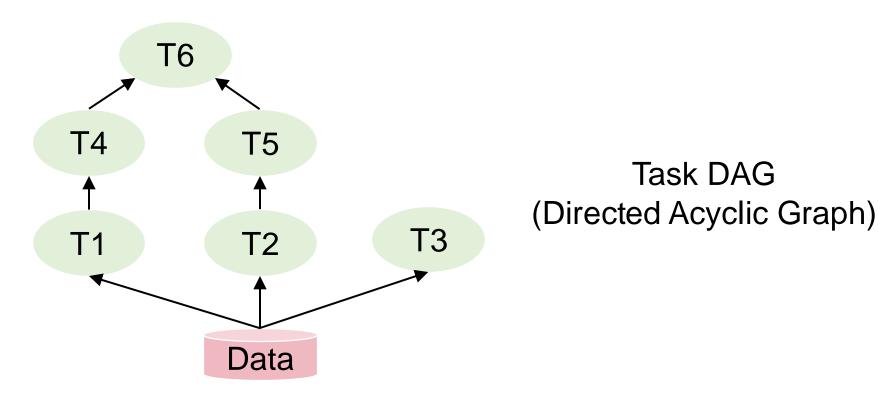

Ready: 3

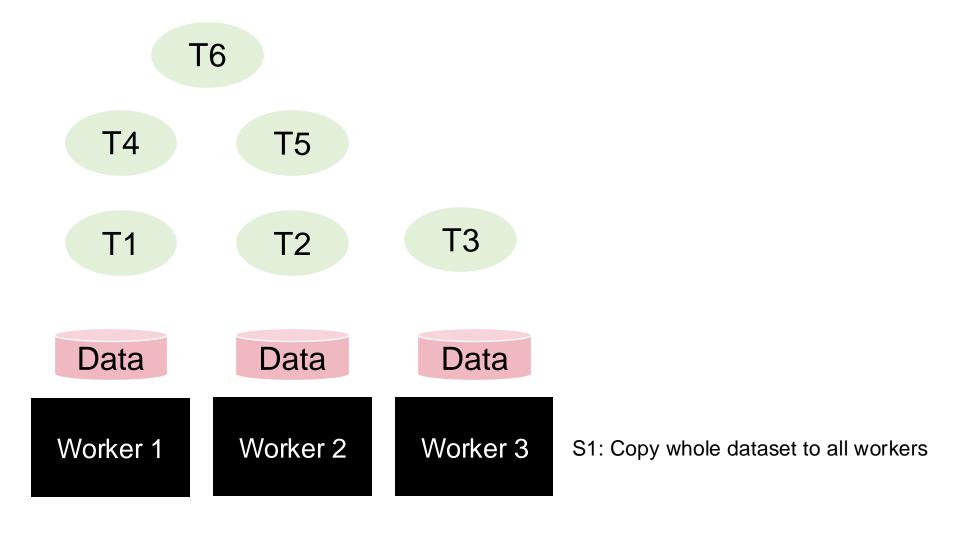

Blocked: 2

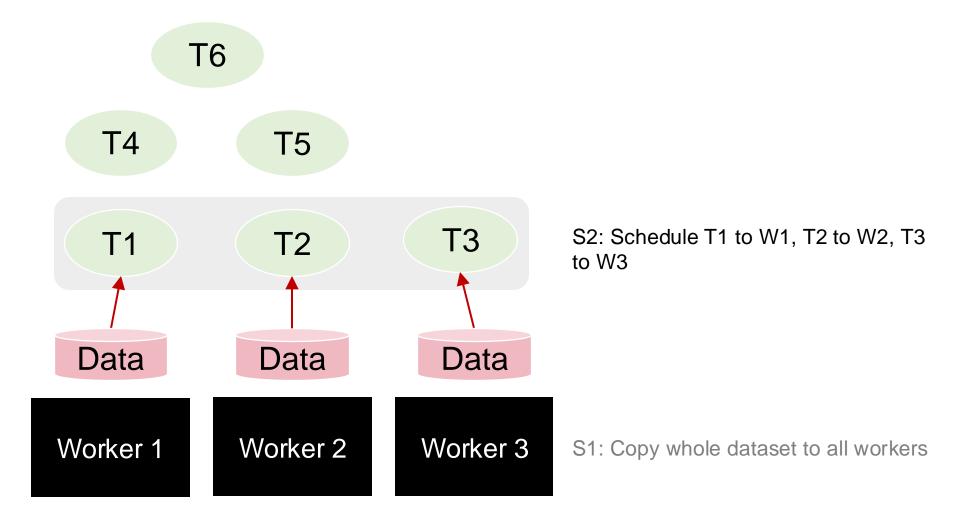

Demo ...

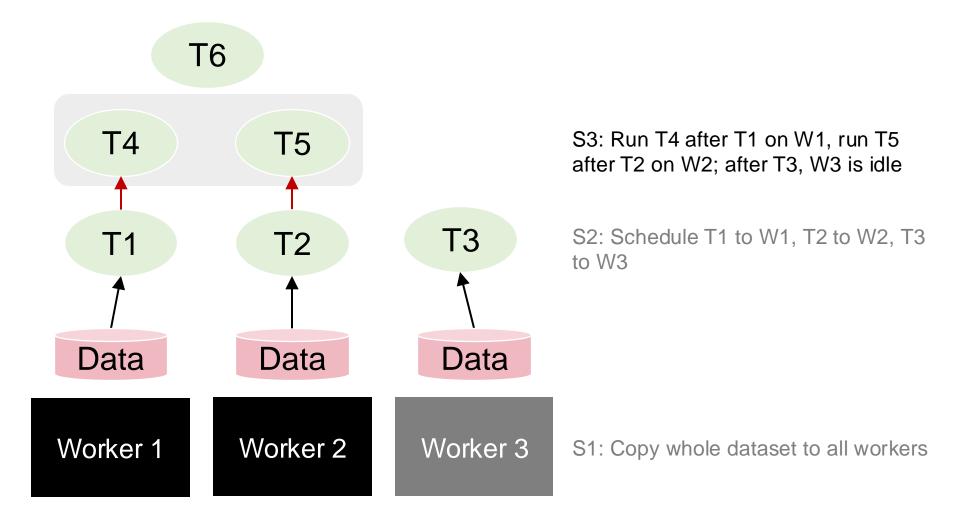

Parallel execution models

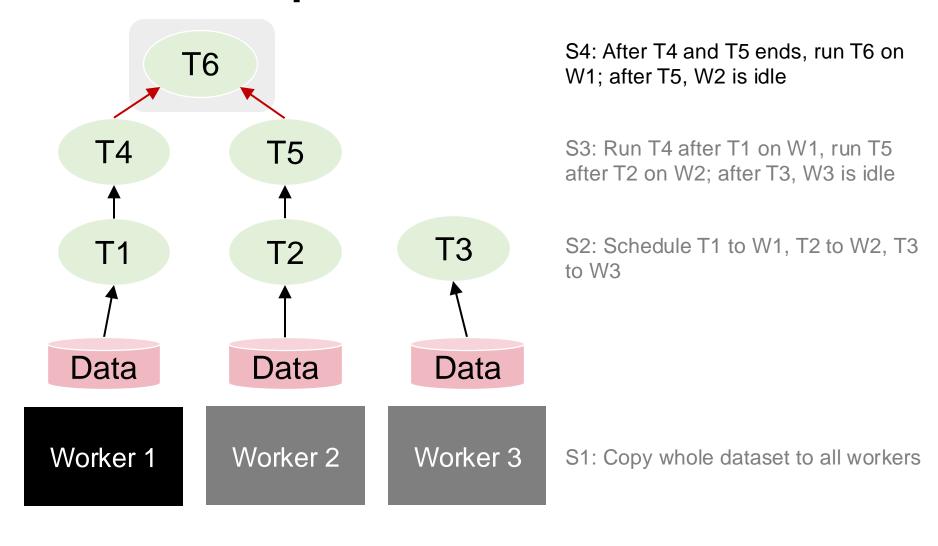

- Process-level parallelism
- Thread-level parallelism
- Task-level parallelism

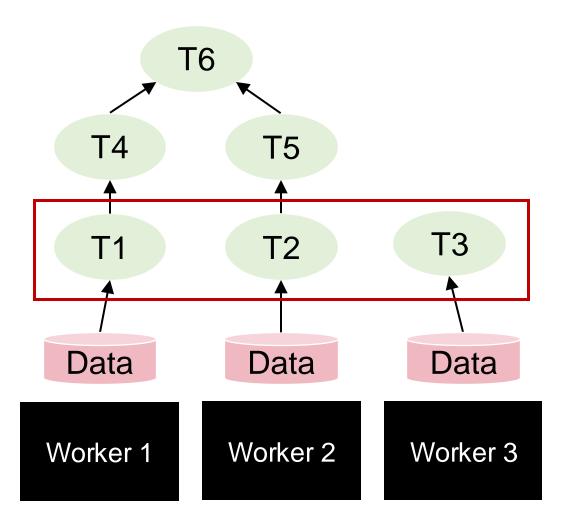

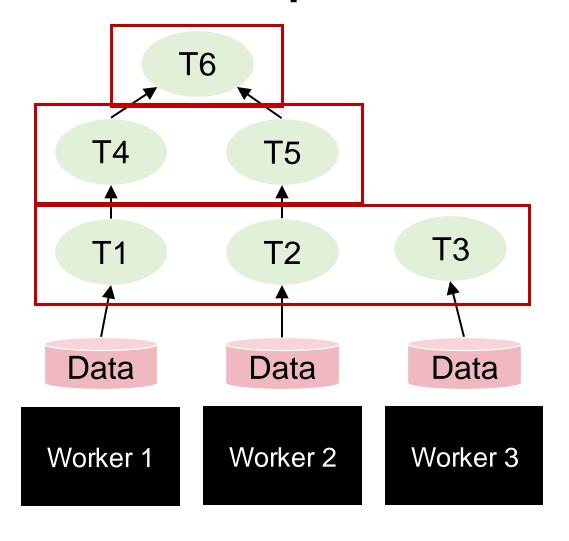

Degree of parallelism is the largest amount of parallelism possible in the DAG:

 How many tasks can be run in parallel at most

Observations:

Resource wastage on idle workers

Overtime degree of parallelism drops!

Degree of parallelism is the largest amount of parallelism possible in the DAG:

 How many tasks can be run in parallel at most

Quantify benefit of parallelism: Speedup

Quantify benefit of parallelism: Speedup

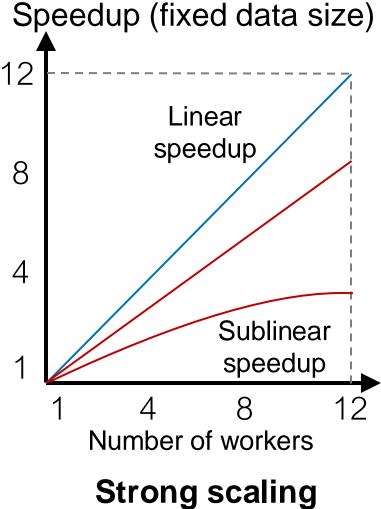

Q: Given N workers, can we get a speedup of N?

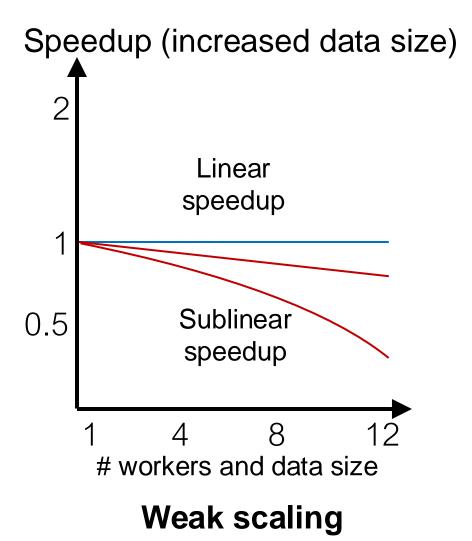

Quantify speedup

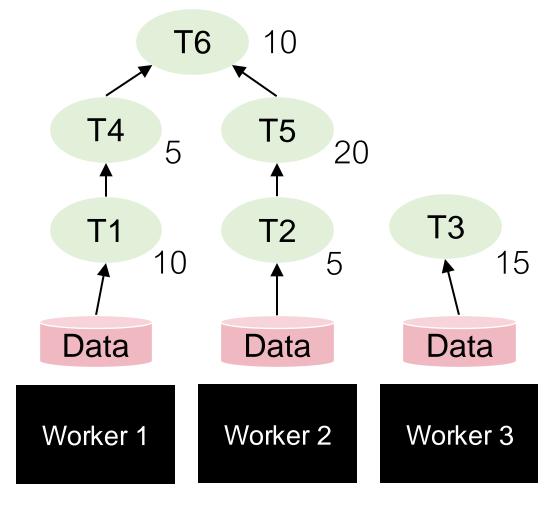

Strong scaling

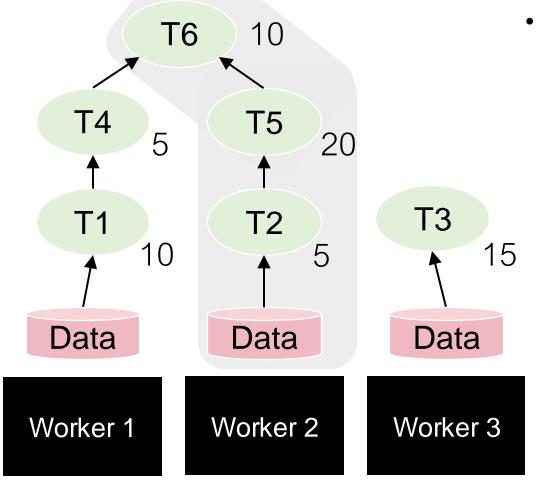

Quantify speedup

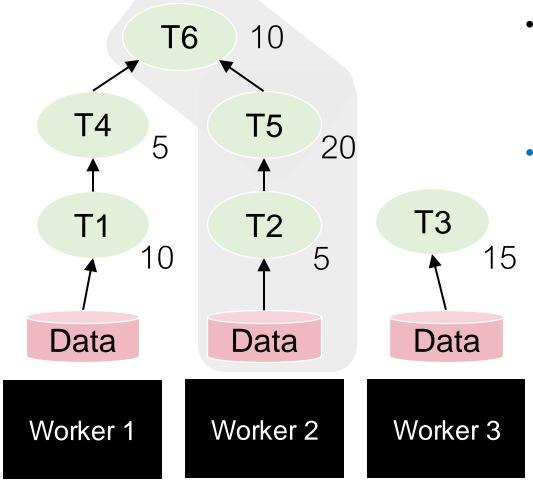

Task completion time varies

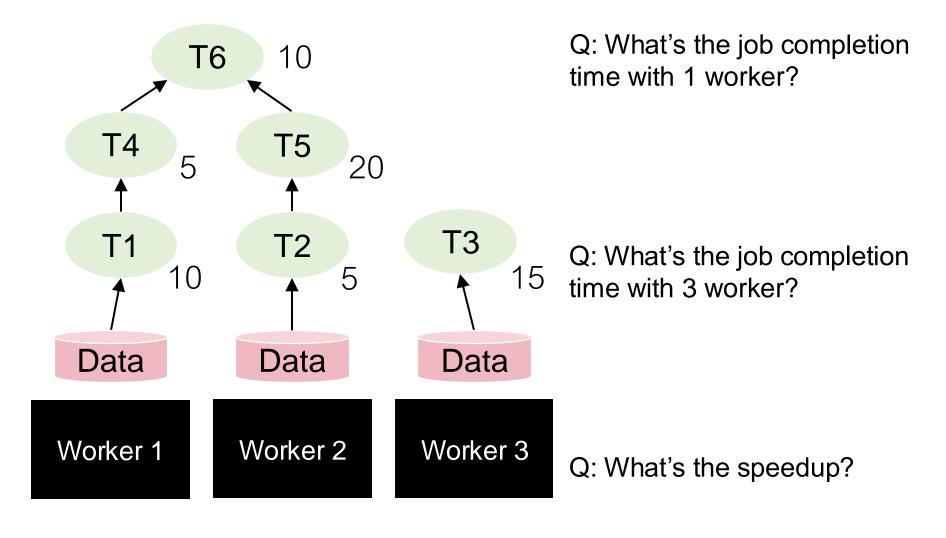

Job completion time is always bounded by the longest path in the DAG

Task completion time varies

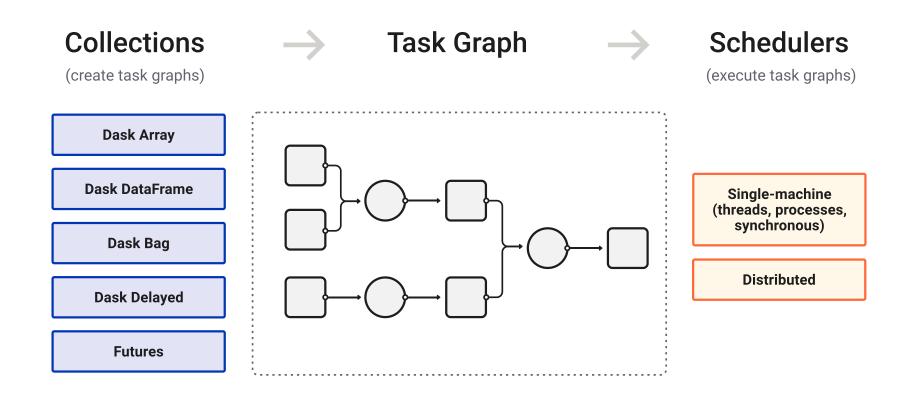

- Job completion time is always bounded by the longest path in the DAG
- Potential optimization: The scheduler can elastically release a worker if it knows the worker will be idle till the end
 - Can save \$ cost in cloud

Task completion time varies

Task parallelism in Dask

^{*} https://docs.dask.org/en/stable/

^{*} https://docs.dask.org/en/stable/scheduling.html

Dask's task graph and workflow

```
import dask
import dask.array as da
x = da.random.normal(size=1_000_000, chunks=100_000)
```

Dask's task graph and workflow

Dask's task graph and workflow

```
import dask
     import dask.array as da
    x = da.random.normal(size=1 000 000, chunks=100 000)
                               Lazy evaluation: Dask computation can be
                               triggered manually, e.g., .compute ()
    data = x.compute()

    only when the result is needed

    dask.visualize(x)
                               Draw the task graph using .visualize()
                   2
normal
        normal
                 normal
                          normal
                                  normal
                                           normal
                                                    normal
                                                             normal
                                                                     normal
                                                                              normal
```
